Vector Pro

Introduction

In the summer of 1986 a renowned American synth manufacturer released a machine with a remarkable new method of constructing sound. That machine was the Sequential Prophet VS and the method was vector synthesis. A ground-breaking instrument in its time and still a sought-after collectible to this day, the Prophet VS was ill-fated in the market for a number of reasons and its failure signaled the end of Sequential's distinguished legacy. Needless to say the tonal range and sheer flexibility of the Prophet VS was brilliant. The new digital vector synthesis engine was placed in front of an all-analog signal path with renowned Curtis amps and filters giving it incredible warmth and an unmistakable character. The palette of sounds that were possible with the VS was immense. Not only did it offer a world of never-before heard sounds but it could closely imitate both the analog classics and its modern digital peers alike. Another first, the Prophet VS saw great emphasis placed on expressive control over a stereo sound stage allowing for great depth and dimension, leading in large part to it capturing the imagination of an entire generation of film composers including the seminal Vangelis and John Carpenter.

Vector Pro begins with one of these rare treasures, a fully serviced Sequential Prophet VS. Sound designers in our studio poured over and through this machine to create a multitude of patches, from textbook classics to the wild and experimental, resulting in a true exposition of the machines capabilities. These patches were then multi-sampled through a world-class system at high-resolution, capturing every detail. While no sample-based instrument can ever be definitive in a true sense, Vector Pro offers a staggeringly thorough depiction of the Prophet VS with a 30gb library of sample data. Filtering, modulation, expression and effects are all realized with the capable UVI Engine, offering near-limitless customization options. Two basic architectures are provided in Vector Pro, VS and VX. Vector

Pro VS offers an efficient and flexible single oscillator system which expresses quite unmistakably the qualities of the Prophet VS. Vector Pro VX takes things a step further with a dual-layer system built on a library of raw multi-sampled waveforms. This system allows for the exploration of completely new sounds with independent control of each layers amp, filter, stereo and effects sections, a built-in LFO, step modulator and two versatile arpeggiators. User interfaces for both recall the classic design of the Prophet VS and sport a full array of programmable controls that should be both immediate and intuitive to anyone with synthesizer experience.

As a bonus we've included Vector Pro 22. Made in the same depth and fashion as Vector Pro VS, Vector Pro 22 details the classic Yamaha SY22 vector synthesizer. The SY22 was designed by former Sequential engineers after Yamaha purchased the group and is loosely based on the Prophet VS architecture. Offering its own unique character and modulation opportunities, the SY22's sound makes a perfect compliment to the VS library.

Vector Pro offers a huge range of sounds of both impeccable quality and distinct character. A great sounding instrument sure to please sound designers, producers, composers or anyone else looking for sonic inspiration.

Minimum System Requirements

- Latest verion of UVI Workstation or Falcon
- 18GB of disk space

For more information on the installation process, please refer to the document: Soundbank Installation Guide

Vector Pro

VS - Edit Page

The UI is divided into two pages; [Edit] and [Mod]. Primary controls such as amp, filter, stereo, pitch and effects are available on the [Edit] page. Clicking the [Mod] button at the top of the interface reveals the second page of controls containing the LFO and Step Modulator. Presets are accessible directly through the browser in UVI Workstation/Falcon.

1 ▶ Globals + Page

» **Mono**
Disables polyphony if active

» **Arp**
Toggle built-in arpeggiator on/off
*[additional controls available in UVIWS/
Falcon arp page]*

» **Edit**
Sets the UI to the Edit page

» **Mod**
Sets the UI to the Mod page

2 ▶ Filter

» **ADSR**
Typical envelope controls for the filter

» **Vel Sens**
Adjust the filter velocity sensitivity

» **Depth**
Depth of the filters EG

» **Cutoff Freq**
Filter cutoff frequency

» **Resonance**
Filter resonance amount

» **Filter Type**
Multimode filter can be set to low-pass
(LP), band-pass (BP), or high-pass [HP]

3 ▶ Amp

» **ADSR**
Typical envelope controls for the amp

» **Velocity**
Adjust the amp velocity sensistivity

» **Vel > Atk**
Remaps Attack to Note Velocity

4 ▶ Modwheel

This section provides a quick way to
map common controls to your MIDI
keyboards modwheel

» **Vibrato**
Speed of the vibrato (free)

» **Tremolo**
Speed of the tremolo (sync)

» **Filter**
Cutoff frequency of the Filter

5 ▶ Effects

» **Phaser**
Adjust effect mix amount

» **Delay**
Adjust effect mix amount

» **Reverb**
Adjust effect mix amount

6 ▶ Noise

» **Amount**
Adjust noise mix amount

» **White/Pink**
Select white or pink noise types

Vector Pro

7 ▶ Stereo

» **Color**
Utilizes neighboring samples from the library to a unique effect

» **Spread**
Sets the stereo width (in ALT and UNI modes only)

» **Detune**
Detunes the unison layers (UNI mode only)

» **Mode – Off**
Sets the stereo mode to OFF (monophonic)

» **Mode – Alt**
Sets the stereo mode to ALT; stereo position alternates L/R every note, width controlled by [SPREAD]

» **Mode – Uni**
Sets the stereo mode to UNI; layers multiple samples and augments them for increased stereo presence, modify with [COLOR] and [DETUNE]

» **Mode – Chorus**
Activates hardware Chorus layer

8 ▶ Pitch

» **Depth**
Sets the depth of portamento [Poly]

» **Time**
Sets the glide time for both modes

9 ▶ Drive

» **Amount**
Sets the drive amount

» **On/Off Switch**

Vector Pro

VS - Mod Page

1 ▶ LFO

» **Sync**
  Toggle LFO sync to host tempo

» **Speed**
  Set the LFO speed

» **EG Depth**
  Set the depth of the LFO envelope

» **Attack**
  Set the LFO envelope attack time

» **Decay**
  Set the LFO envelope decay time

» **Shape**
  Select the LFO waveform: Sine, Square, Triangle or Sample & Hold (random)

» **> Pitch**
  Set the pitch modulation amount

» **> Drive**
  Set the drive modulation amount

» **> Volume**
  Set the volume modulation amount

» **> Filter**
  Set the filter modulation amount

2 ▶ Step Modulator

» **Step Value**
  Set the per-step value (draw with mouse, double-click to enter explicit values)

» **Grid**
  Set the step speed/resolution

» **Steps**
  Set the number of steps to playback

» **Delay**
  Set the initial delay time

» **Rise**
  Set the time to activate smooth

» **Smooth**
  Interpolates sub-step values for a smooth modulation

» **> Volume**
  Set the volume modulation amount

» **> Filter**
  Set the filter modulation amount

▶ Saving Presets

» **UVI Workstation**
  1. Click the [Multimode] button in the main toolbar
  2. Click the [Wrench] icon
  3. Select 'Save Multi'

» **Falcon**
  1. Click the [Wrench] icon and save as a Multi (all parts) or as a Program [single]

  Settings for both UVI Workstation and Falcon will be saved automatically with your project if you're working within a DAW.

Vector Pro

VX - Edit Page

The UI is divided into three pages; [Edit], [Mod] and [Arp]. Primary controls such as amp, filter, stereo, pitch and effects are available on the [Edit] page. Clicking the [Mod] button at the top of the interface reveals the second page of controls containing the LFO and Step Modulator. The final [Arp] page presents an independent arpeggiator for each layer.

Main

1 ▶ Presets

Select a global preset from the pull-down menu or browse them with the Prev/Next arrows

2 ▶ Pages

Change the current page by selecting one of the 3 options; Edit, Mod or Arp

3 ▶ Layer Globals

» **On/Off Toggle**
Turn layers 1 and 2 on or off

» **Volume**
Adjust the Volume of each layer

» **Pan**
Adjust the Pan of each layer

4 ▶ Master Gain

Set the Output Gain for the instrument

Basic Controls

5 ▶ Layer Edit

» **Edit 1 | Edit 2 | Edit All**
Choose to edit layers 1 or 2 seperately or simultaneously

» **Wave Menu**
Choose the wave category in the first row and the wave in the second

6 ▶ Pitch

» **Tune**
Adjust the pitch in Semitones/Cents

» **Depth**
Adjust the Portamento depth

» **Mono**
Toggle between Mono and Poly voicing

» **Octave**
Adjust the pitch in Octaves

» **Time**
Set the Glide time

7 ▶ Amplitude

» **ADSR**
Attack / Decay / Sustain / Release envelope for the Amplitude section

» **Velocity > Attack**
Modulates attack amount based on incoming note velocity. Low velocities result in long attacks; high velocities result in short attacks.

» **No Velocity**
Sets all incoming notes to max velocity

8 ▶ Drive

» **On/Off Switch**

» **Amount**
Sets the amount of drive

VX - Edit Page [continued]

Basic Controls (continued)

9 ▶ Stereo

» **Mode**
  Off / Alternate Pan / Unison

» **Color**
  Shifts color based on adjacent samples

» **Spread**
  Change the stereo width

» **Detune**
  UNI Mode Only: setunes layers

10 ▶ Filter

» **ADSR**
  Attack / Decay / Sustain / Release
  envelope for the Filter section

» **Cutoff**
  Filter cutoff frequency

» **Resonance**
  Adjust the resonance (Q) of the Filter

» **EG Depth**
  Modifies the amount of ADSR envelope
  to be applied to the Filter

» **Velocity**
  Adjust the Velocity > Filter sensistivity

» **Type**
  Choose Filter mode; High Pass, Band
  Pass, or Low Pass

11 ▶ Effects

» **Power/Amount**
  Choose from Phaser, Delay, Reverb and
  Chorus (additional controls available in
  the Effects page of Falcon)

12 ▶ Modwheel

» **Power/Amount**
  Easily route your controllers Modwheel
  to control common parameters such as
  Vibrato, Tremolo and Filter Depth

Vector Pro

VX - Mod Page

LFO

1 ▶ **Sync**
Enable/Disable LFO sync to Host Tempo

2 ▶ **Waveforms**
Choose LFO waveform; Sine, Triangle, Square or Sample & Hold

3 ▶ **LFO Controls**
» **Speed**
Change the LFO Speed
» **EG Depth**
Adjusts the amount of Attack and Decay to be applied to the LFO
» **Attack**
Attack time for the Speed envelope
» **Decay**
Decay time for the Speed envelope

4 ▶ **Mod Routing**
Control the amounts of LFO modulation to be applied to various parameters including; Pitch, Drive, Volume and Filter

Step Modulator

5 ▶ **Step Sequencer**
Interactive editor for programming sequenced modulations; bar height equals mod amount

6 ▶ **Params**
» **Grid**
Change the sequencers step length
» **Steps**
Change the amount of steps for the sequencer to play

» **Delay**
Delay time to activate first step
» **Rise**
Time to activate step with a smooth transition
» **Smooth**
Interpolates values between adjacent steps to smooth parameter modulation for a custom LFO effect

7 ▶ **Mod Routing**
Control the amounts of modulation to be applied to various parameters including; Volume and Filter

Vector Pro

VX - Arp Page

1 ▶ Step Indicator
LED lights up when step is triggered

2 ▶ Step Editor
16-step sequencer; affects Velocity

3 ▶ Tie
When active, step inherets Velocity from
the previous step

4 ▶ Layer 1 > Layer 2
When active, Arpeggiator 1 affects
both layer 1 and layer 2 (whereas
when disabled each Arp modifies its
corresponding layer only)

5 ▶ Arp On/Off
Toggle the Arpeggiator On/Off

6 ▶ Grid
Change the step length

7 ▶ Arp Mode
Select Up, Down, or Up and Down

8 ▶ Gate
Change the step length (knob value
ranges from zero to the tracks
Resolution setting)

9 ▶ Steps
Sets the Arpeggiators step length

10 ▶ Octave
Set the pitch range of the Arpeggiator
in Octaves

22 - Edit Page

1 ▶ Mono/Poly
Switch between mono and poly modes

2 ▶ Stereo
» **Mode – Off** (mono)
» **Mode – Alt**
Stereo position alternates L/R every note, width controlled by [SPREAD]
» **Mode – Uni**
Layers multiple samples and augments them for increased stereo presence
» **Color**
Utilizes neighboring samples from the library to a unique effect
» **Spread**
Sets the stereo width
» **Tune**
Detunes the unison layers (UNI mode)

3 ▶ Amplitude
» **Vel > Atk**
Remaps Attack to Note Velocity
» **ADSR**
Typical envelope controls for the amp
» **Velocity**
Adjust the amp velocity sensistivity

4 ▶ Filter
» **Filter Type**
Multimode filter can be set to low-pass (LP), band-pass (BP), or high-pass [HP]
» **ADSR**
Typical envelope controls for the filter
» **VEL**
Adjust the filter velocity sensitivity
» **CUT**
Filter cutoff frequency
» **RES**
Filter resonance amount
» **ENV**
Depth of the filters EG

5 ▶ Pitch
» **Depth**
Sets the depth of portamento [Poly]
» **Time**
Sets the glide time for both modes

6 ▶ Drive
» **On/Off Switch**
» **Amount**
Sets the drive amount

7 ▶ Bit Crusher
» **Bit Crusher On/Off**
Enable/Disable the Bit Crusher effect
» **Bit**
Set the bit reduction
» **Frequency**
Set the Bit Crusher sample rate
» **Drive**
Adjust the overdrive amount of the Bit Crusher effect

8 ▶ Effects
» **Phaser**
Adjust effect mix amount
» **Delay**
Adjust effect mix amount
» **Reverb**
Adjust effect mix amount

9 ▶ Modwheel
» **Power/Amount**
Easily route your controllers Modwheel to control common parameters such as Vibrato, Tremolo and Filter Depth
